

Welcome to

Better Together:

Patient Expectations and the Accountability Gap

Consumer Healthcare Survey Results

Press Conference

June 15, 2016

The Center for Total Health, Washington, D.C.

About Us

The Council of Accountable Physician Practices (CAPP), an affiliate of the American Medical Group Foundation, is a coalition of visionary medical group and health system leaders.

We believe that physicians working together, backed by integrated services, systems, data and technology, can best shape and guide the way care is delivered so that the welfare of the patient is always the primary focus.

Why This Study?

- The post-ACA environment major payers, regulatory environment – is now focused on care delivery re-design and payment mechanisms for value
- A continued need to understand progress the nation is making toward "accountability" in health care – from the perspective of the patients and the care delivery system.

Presenters

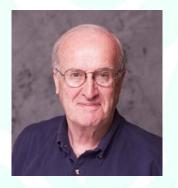

Jennifer Colamonico Vice president of Healthcare Insights for Nielsen.

Laura FegrausExecutive Director, CAPP

Dr. Robert Pearl
Chair of CAPP and CEO of The
Permanente Medical Group and
the Mid-Atlantic Permanente
Medical Group.

Humphrey Taylor Chairman Emeritus, The Harris Poll.

Today at 1 p.m.

Better Together Health: Patient Expectations and the Accountability Gap www.bettertogetherhealth.org

Keynote Speaker: Senator Johnny Isakson (R-GA); Co-Chair Chronic Care Workgroup, Senate Finance Committee

Featured Speaker: Tim Gronniger, CMS

Host: Robert Pearl, MD: Chairman, CAPP; Executive Director and CEO, The Permanente Medical Group, President and CEO, Mid-Atlantic Permanente Medical Group

Moderator: Ceci Connelly, CEO, Alliance of Community Health Plans

Panelists:

Karen Cabell, DO: Billings Clinic

Regina Holiday: Patient Rights Advocate

Marc Klau, MD: Southern California Permanente Medical Group

Janet Marchibroda: Director, Bipartisan Policy Center, Health Innovation Initiative

Leana Wen, MD: Health Commissioner, Baltimore City

Jenny's Story

A video goes here

Introduction

- The next step in health reform after universal coverage is improvement of the care delivery system in terms of efficiency, quality and access
- "Accountable care" is the vision for improved care delivery
- CAPP believes that accountable care is experienced by patients through 5 key features and benefits

Accountable Care Patient Benefits

- Care team coordination
- Prevention
- **2**4/7 access
- Evidence-based medicine (treatments based on proof)
- Enabled by robust technology

The Accountable Care Experience of U.S. Consumers and Physicians

Results from surveys in partnership with Nielsen Strategic Health Perspectives

Jennifer Colamonico, VP Healthcare Insights Nielsen's Strategic Health Perspectives

Key Survey Takeaways

Care/Team Coordination

- Coordination is improving, and many patients are experiencing some aspect of it
- Coordination for those managing multiple conditions is not noticeably better than for healthier patients

24/7 Access to Care

- 24/7 access to care still not available to most patients
- Access to digital care also not available to most

Treatment Based on Proof

Many docs—but not all—report they are using evidence-based treatment guidelines

Key Survey Takeaways

Health Information Technology

- Slow progress, but many are not using what they have
- Technology alone is not going to improve coordination particularly if many older/sicker people don't want it

Preventive Primary Care

- Physician efforts in prevention not being heard by patients; there is a large gap around weight management
- Opportunities to improve physician efforts at helping patients prevent disease

Accountable Care Can Be Measured in Direct Patient Experiences

Care/Team Coordination

24/7 Access to Care

Treatment based on Proof

Robust Health Information Technology

Primary Care

- Measures asked in a large online survey of US consumers (30,007 respondents) in March 2016 by Nielsen's Strategic Health Perspectives. Some measures can be tracked to Nielsen's prior work with CAPP in 2015.
 - Data weighted for representativeness; significance testing shown at 95% confidence interval
- Physician data shown from Nielsen's 2015 Survey of 626 US physicians unless otherwise noted.

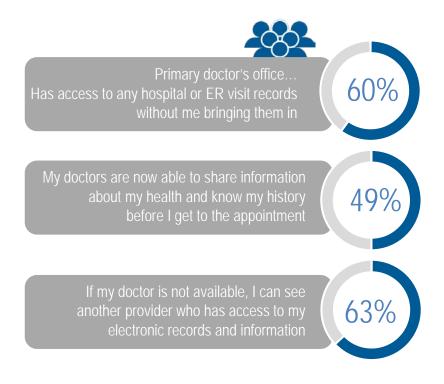

Are Patients Experiencing Care Teams and Coordinated Care?

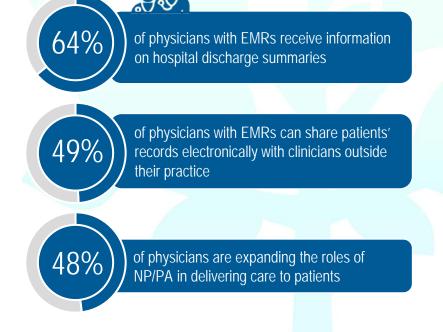

Care Coordination:

About Half the Time, Patient Information Is Still Not Shared Across Providers

Base: Past 12 Month Doctor Visit/Doctor Has EMR 2016 Doctor (n=25,527) 2016 Doctor Has EMR (n=4,369)

Base: US Physicians Total 2015 (n=626) Has EMR (n=502)

Care Coordination:

There Is a Gap Between Physician Follow-Up and the Patient Experience

Primary doctor's office...

Calls me if I don't make a follow up appointment or fill a prescription

36%

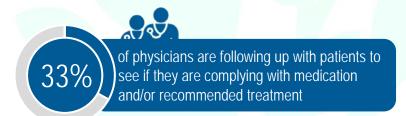

Primary doctor's office...has a nurse or care manager to help me stay on track or comply with my treatment/instructions

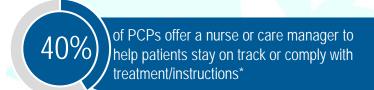

37%

After discharge...received a follow up call or visit from PCP within 2 weeks to find out how I was doing and to review treatment instructions

Base: Past 12 Month Doctor Visit or Hospitalization 2016 Doctor (n=25,527) 2016 Hospitalization (n=4,780)

Base: US Physicians Total 2015 (n=626) Has EMR (n=502) *MD Answers 2016 Quick Quant 100 PCPs

Are Patients Getting 24/7 Access to Doctors?

24/7 Access:

About One in Three Patients Has It; Gap in Awareness of 24/7 Phone Advice

Base: US Physicians Total 2015 (n=626) *MD Answers 2016 Quick Quant 100 PCPs

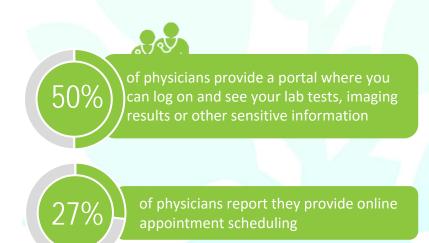

24/7 Access:

Close to Half of Patients Have Online Access to Information and Transactions

Physician's office provides ... Communication via an online secure messaging platform that requires you to set up a log-in and a password in order to ensure the protection of sensitive data

Base: US Physicians Total 2015 (n=626) Has EMR (n=502)

Are Physicians Using Evidence-Based Treatments?

Robust Health Information Technology

Preventive **Primary Care**

Evidence-Based Care:

Physicians Say They Use Guidelines,

But Most Patients Don't Recall Discussions About Them

oettertogetherhealth

Are Physicians Utilizing Technology to Improve Care?

Care/Team

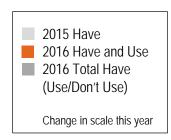

Coordination

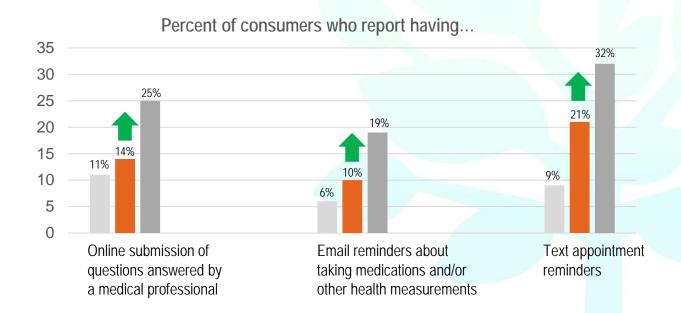

Care/Team

Coordination

Access to Electronic Engagement Is Increasing But Still Low

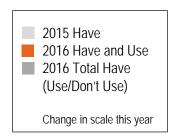

Base: All US Consumers 2015 (n=5014) 2016 (n=30007)

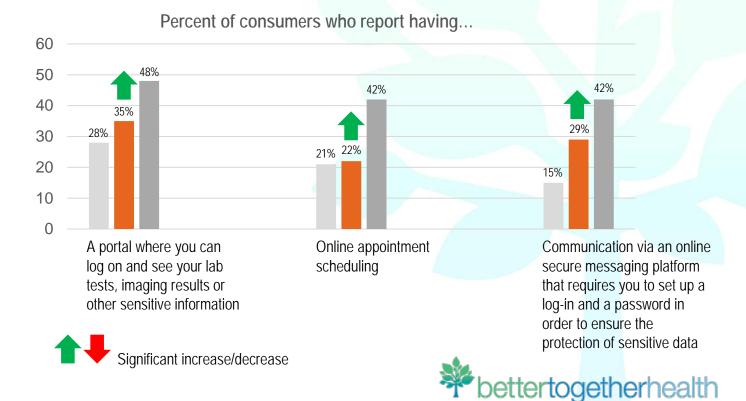

Care/Team

Coordination

Half to One-Third of Patients with Online Access Don't Use It

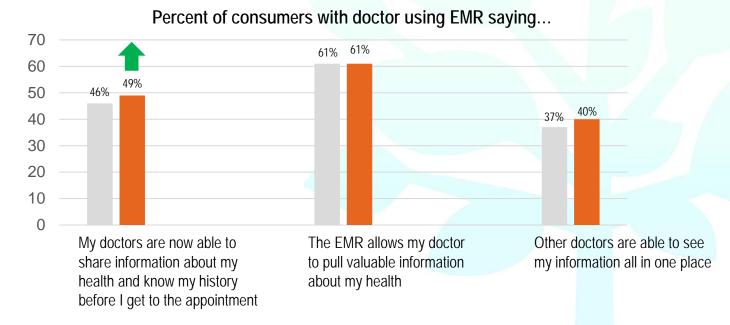

Treatment

based on Proof

Base: All US Consumers 2015 (n=5014) 2016 (n=30007)

Perception of Shared EMR Information Is Stable

Treatment

based on Proof

Significant increase/decrease

Base: Doctor Uses an EMR 2015 (n=1990) 2016 (n=4369)

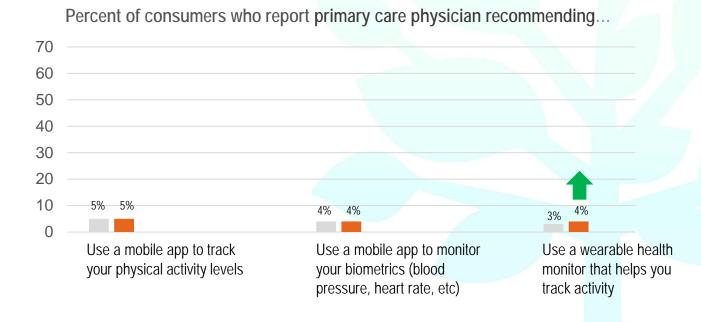

Care/Team

Coordination

Patient-Physician Engagement Around Mobile Apps Remains Low

Are We Preventing Illness As Well As We Are Managing It?

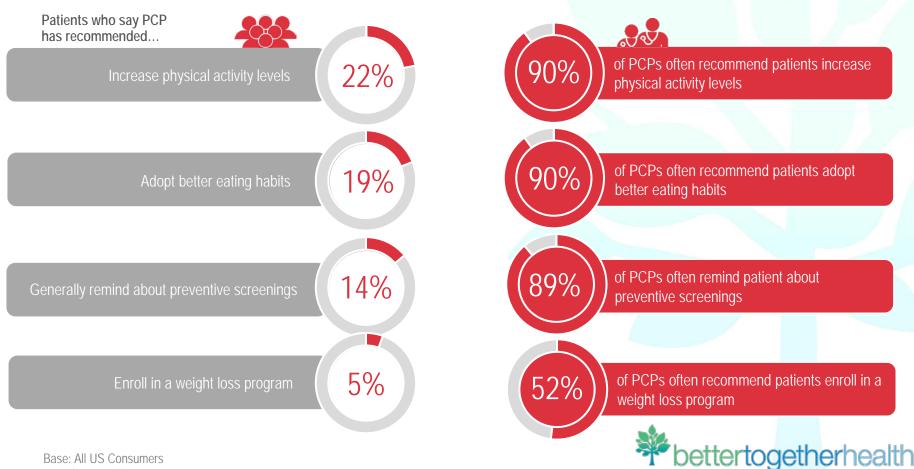

Care/Team

Coordination

Prevention:

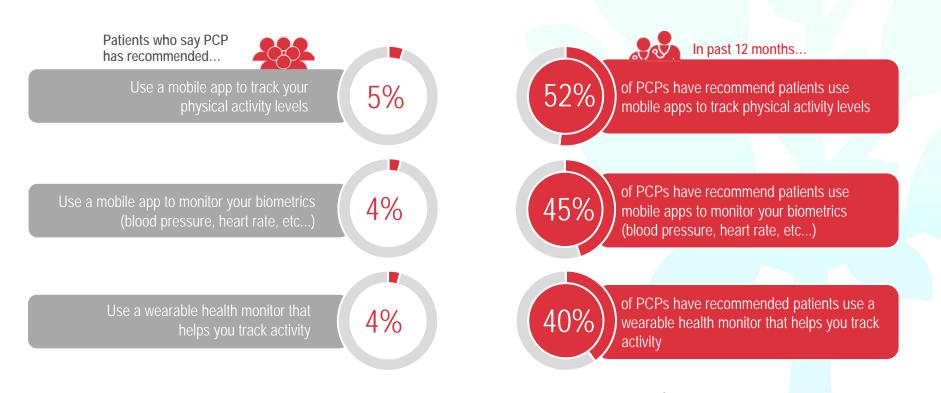

Patients Don't Hear Doctors' Advice on Screenings and Weight Management

Base: All US Consumers 2016 (n=30,007)

Prevention:

Doctors Starting to Suggest Mobile Devices But Patients Aren't Hearing Them

Is the Experience of Accountable Care and Coordination Improving Over Time?

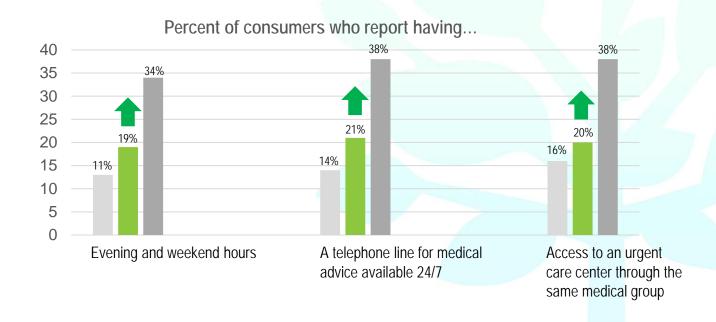

24/7 Access:

Improving Slowly, But Not Always Used

2015 Have
2016 Have and Use
2016 Total Have
(Use/Don't Use)
Change in scale this year

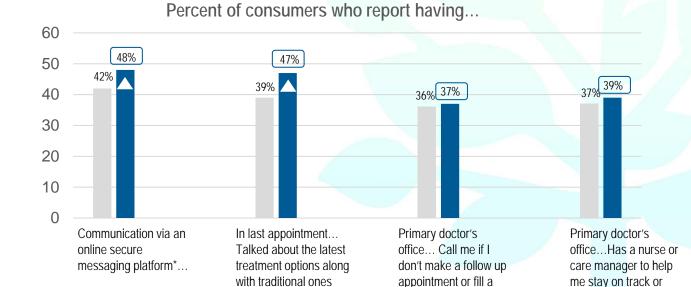

Care Coordination:

Patients with Multiple Chronic Illness Get Only Slightly More Coordinated Care

prescription

*Base: All US Consumers (Total Have)

2016 Total (n=30,007)

"Chronically III" = Patients with 3+ chronic conditions (N=13,260)

Base: Past 12 Month Doctor Visit

2016 Total (N=25,527);

"Chronically III" = Patients with 3+ chronic conditions (N=12,523)

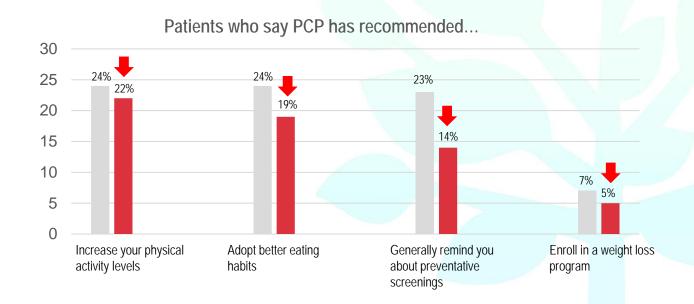

comply with my treatment/instructions

Prevention:

Physician Messages Are Being Heard Less Often

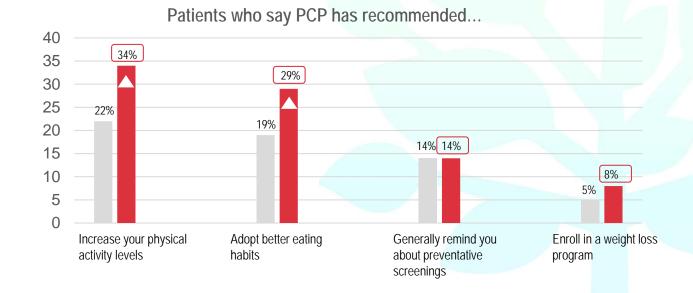

Prevention:

Amidst an Obesity Epidemic, Overweight Patients Are Not Getting Prevention Messages

∧ Significant difference from total

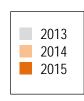

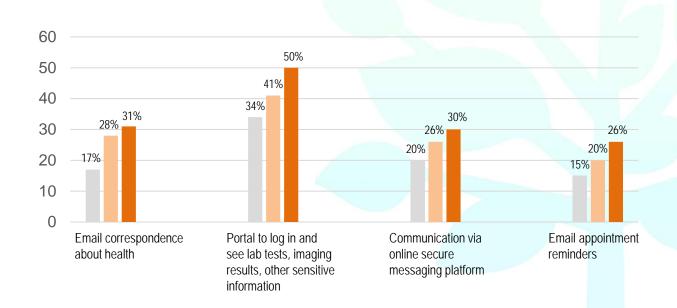

2016 Total (n=30,007)

"Obese" = Patients with 40+ BMI (N=10,462)

Physicians are slowly moving towards high tech patient engagement

Treatment

based on Proof

Significant increase/decrease

Base: US Physicians Total 2015 (n=626) 2014 (n=600), 2013 (n=600)

What Are the Demographic Gaps in **Usage of Key Technologies that Support Coordination?**

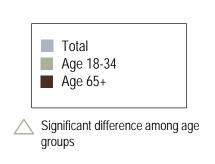

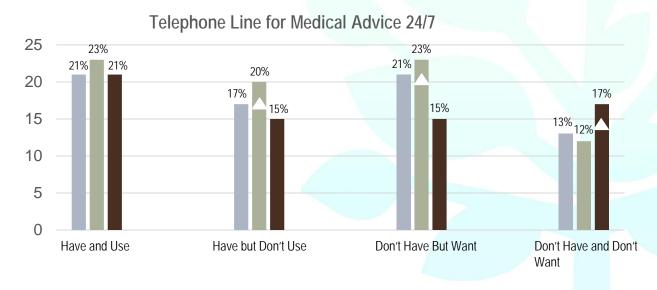

Care/Team

Coordination

Seniors Are Less Open to Telephone Advice than Younger Patients

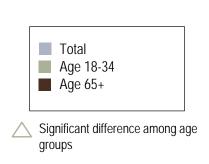

Treatment

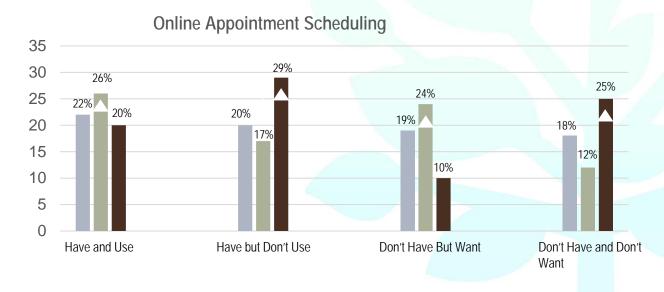

based on Proof

Older Patients Even Less Interested In and Likely to Use Online Scheduling Tools

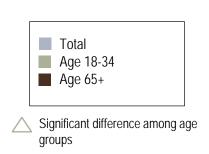

Treatment

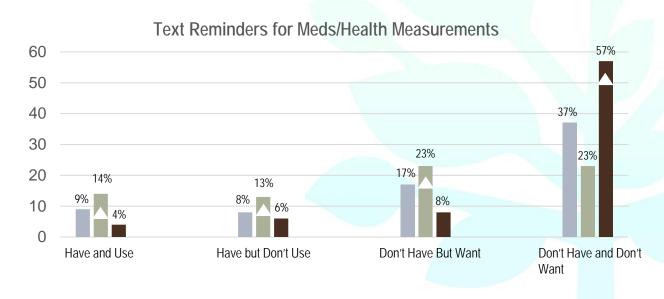

based on Proof

Text Reminders Are Least Appealing to Older Patients

Treatment

based on Proof

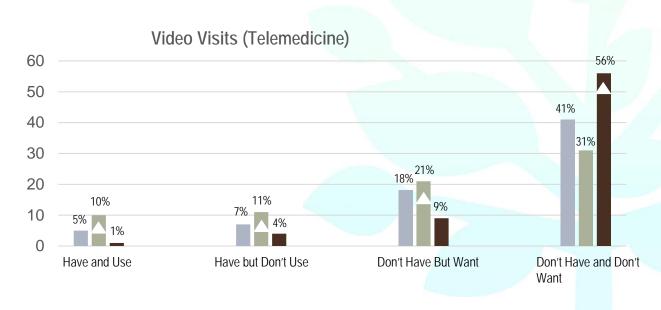

Video Visits Still Rare,

Care/Team

Coordination

But Younger Patients Twice as Likely to Use and Want Them

11% of physicians say their compensation is in part based on "seeing patients online (telemedicine)"

Base: All US Consumers (Total Have) 2016 Total (n=30,007)

Age 18-34 (N=7,348); Age 65+ (N=6,416)

Research Conclusions

Patient Experience Report Card:

Coordinated, Accountable Care

Patients with chronic illness do not perceive more coordination of care

Care/Team Coordination 24/7 Access to Care

Treatment based on Proof

Robust Health Information Technology

Preventive Primary Care

ENCOURAGING

About half of patients are experienced coordinated care teams, and about one/third physician follow-up

NEEDS WORK

Only about one/third of patients have 24/7 access

ENCOURAGING

Most physicians report using evidence-based guidelines

NEEDS WORK

Use is growing but still rare; Some older adults not interested

TOO LOW FOR COMFORT

Most patients do not get the message, if one is delivered, especially around weight management

CAPP's Conclusions

- Need to continue to help Americans define quality in the new world of "accountable care"
- Continue to encourage greater system-ness and clinical integration
- Prevention and continued improvement of chronic care coordination must be the priorities
- Improve the effectiveness of counseling and preventive care
- Improve access to 24/7 care
- Medical groups to provide more education on the technology available; make sure staff understand how it can be used in lieu of more expensive options, like ER
- Find ways to give patients experience with this technology, to overcome older adults reticence to use it

Policy Levers to Close the Gap

- Payment reform increase movement to value among all payers to support system-ness and better outcomes
- More robust health information technology to improve sharing of info among providers and allow for easier access to providers by consumers
- Standardize quality measures in language consumers understand and that are relevant to healthcare today
